

Faham AI End User Walkthrough

How to search, verify evidence, upload documents, monitor indexing, and use role-based features

Field	Details
Audience	End users, contributors, reviewers, and auditors using the web workspace
Scope	Sign-in, navigation, querying, evidence review, uploads, document library, activity, review, and audit
Not covered	Deployment, user provisioning, model/runtime configuration, and developer operations
Updated	2026-06-18

Tip: Read the Quick Start first, then jump to the feature that appears in your sidebar.

How to Use This Guide

Your sidebar is permission-aware. If a feature described here does not appear, your account does not include that permission.

1. Sign in with your workspace email and password.
2. Check the active Knowledge Space in the sidebar header.
3. Open Query Intelligence and ask a focused question.
4. Inspect citations before relying on an answer.
5. Use Add Files, Activity, Review Queue, or Audit only when those pages appear in your sidebar.

Feature Map

Use this map to connect common tasks to the page where they happen.

Feature	What you do	Where to go
Query Intelligence	Ask questions, watch the retrieval progress, and inspect cited evidence.	Operate > Query Intelligence
Knowledge Space selector	Choose the document scope used for queries and uploads.	Sidebar header
Document Library	Browse, search, inspect, download, and manage visible documents.	Corpus > Document Library
Add Files	Upload PDF, DOCX, JPG, JPEG, or PNG files up to 50 MB each.	Corpus > Document Intake > Add Files
Activity	Track upload, folder, restore, and reingestion jobs.	Corpus > Document Intake > Activity
Folder Sources	Schedule browser folder snapshots or S3/MinIO prefix ingestion.	Corpus > Document Intake > Folder Sources
Review Queue	Correct low-confidence OCR blocks before indexing continues.	Evaluate > Review Queue
System Audit	Review visible authentication, document, and ingestion activity.	Govern > System Audit

Sign In and Navigate

- Open the web application URL provided by your organization. Local deployments commonly use `http://localhost:3000`.
- Sign in with your email and password. Change the initial password in Account Management when needed.
- Use the sidebar sections to move through Operate, Corpus, Evaluate, and Govern pages.
- Use the account area in the sidebar footer to view session details, change password, switch theme, or sign out.

Work With Knowledge Spaces

Knowledge Spaces are the document boundaries used by the system.

- Select the active space before asking questions or uploading from chat.
- Queries retrieve from the active space and any document scope you add with @ tags.
- Uploads inherit the selected writable space.
- If expected documents are missing, first confirm that the active space is correct.

Ask Grounded Questions

1. Open Query Intelligence.
2. Confirm the active Knowledge Space.
3. Type a specific question. Mention dates, document names, entities, or constraints when useful.
4. Press Enter or click Send. Use Shift+Enter for a new line.
5. Watch the progress panel as the system routes the query, retrieves evidence, and drafts the answer.
6. Read the answer and inspect the citations.

Verify Answers With Evidence

- PDF sources can show page navigation and highlighted regions.
- DOCX sources can show matching text where available.
- Image sources can show image highlights or extracted image evidence.
- Low faithfulness, degraded response, conflict, or grounding warnings mean you should verify manually before sharing or acting.

Use Chat History and Generated Files

- Completed conversations appear in the chat history rail.
- Use New chat to reset context.
- Reopen previous conversations when continuing the same task.
- Delete old conversations that are no longer useful.
- When document generation starts, answer clarification questions and download the DOCX, PDF, or PPTX when ready.

Upload Documents

If Add Files appears in your sidebar, you can upload supported source files into a writable Knowledge Space.

Item	Details
Supported files	PDF, DOCX, JPG, JPEG, and PNG

Item	Details
Maximum size	50 MB per file
Required metadata	A writable Knowledge Space
Optional metadata	Effective date, expiry date, description, and supersedes IDs for single-file replacements
Result	Each file receives its own ingestion job

1. Open Document Intake > Add Files.
2. Select one or more supported files.
3. Choose the writable Knowledge Space.
4. Add dates, description, or supersession details if needed.
5. Click Upload documents.
6. Watch Recent upload jobs for progress and warnings.

Track Indexing Activity

Open Activity to monitor upload, folder, restore, and reingestion jobs.

Status	Meaning
Scheduled	Waiting for a planned start time.
Queued	Accepted and waiting for an ingestion worker.
Processing	Being parsed, enriched, chunked, embedded, and indexed.
Needs review	Paused for human OCR or extraction review.
Indexed	Complete and searchable.
Failed	Stopped with an error that needs investigation.
Cancelled	Manually stopped before completion.

- Filter by status, origin, Knowledge Space, date range, or search text.
- Open a job to review stage details, warnings, attempts, and parser provenance.
- If you have write access, you may cancel jobs that are still scheduled, queued, or processing.
- Use Ingestion Health to see active pipeline, failed jobs, review queues, and recent failures.

Browse the Document Library

- Document Overview shows active documents, current versions, processing items, attention items, and Trash count.
- Knowledge Spaces shows the folder tree and direct documents in selected spaces.
- Documents lets you search and filter by lifecycle and ingestion status.
- Trash contains soft-deleted documents that authorized users can restore or permanently delete.

- The Document Inspector shows metadata, extracted facts, version history, downloads, and allowed lifecycle actions.

Use Folder Sources

- Browser snapshot mode submits files selected from a local folder in the browser.
- S3/MinIO prefix mode stores bucket, prefix, schedule, and metadata while credentials stay on the backend.
- Schedules can be one-time or recurring with selected days and a time window.
- Use schedule run details to review queued, skipped, and failed files.

Review OCR Blocks

If Review Queue appears in your sidebar, use it to resolve low-confidence OCR before indexing continues.

1. Open Review Queue.
2. Select a pending block grouped under a document.
3. Compare the OCR text with the source page preview.
4. Edit Corrected extraction text.
5. Click Approve correction to save, or Reject block if it should not continue.

Read the System Audit

If System Audit appears in your sidebar, use it to review visible authentication, document, ingestion, and workspace events.

- Events are newest first.
- Each row shows event type, target, actor, payload summary, and created time.
- Audit is for review and escalation. It is not an editing surface.

Troubleshooting

Issue	Likely cause	What to do
A page is missing	Your account does not have that route.	Ask an admin to confirm your role and Knowledge Space memberships.
You cannot query	The active space has no indexed current documents, or the model runtime is unavailable.	Switch space, wait for indexing, or report the runtime issue.
No documents appear	Wrong active space, insufficient clearance, or no documents are current.	Check the space selector and ask your workspace admin to verify access.
Upload is rejected	Unsupported type, empty file, file over 50 MB, or no writable space.	Use PDF, DOCX, JPG, JPEG, or PNG and choose a writable Knowledge Space.
A document needs review	Low-confidence OCR paused indexing.	A reviewer should correct or reject the pending block in Review Queue.

Issue	Likely cause	What to do
An ingestion job looks stuck	Worker heartbeat, parsing, OCR, or model services may be delayed.	Open Activity or Ingestion Health and share the job ID with operations.
Source highlight is unavailable	The source may lack page coordinates or exact text matching.	Use the original document link and compare page, excerpt, and citation details.
The answer has a warning	Sources may conflict, faithfulness may be low, or the response is degraded.	Inspect citations manually before using the answer.

Safe Usage Practices

- Do not rely on an answer without checking citations for important decisions.
- Use the correct Knowledge Space before querying or uploading.
- Do not upload documents above your clearance or outside your team scope.
- When replacing a file, use supersedes metadata so the older version stays auditable.
- Do not share generated files beyond the same access and clearance rules as the source documents.
- Report repeated model, indexing, or source-viewer errors with the job ID, document title, and time observed.

Glossary

Term	Meaning
Knowledge Space	A document access scope such as /finance or /manuals.
Current document	The active version used for retrieval.
Superseded document	An older version kept for audit and history.
Trash	Soft-deleted documents that can be restored by authorized users.
Ingestion job	The background task that parses, enriches, embeds, and indexes a file.
Citation	A link between an answer claim and its supporting source evidence.
Faithfulness	A grounding check that estimates whether the answer is supported by retrieved evidence.
Generated artifact	A downloadable DOCX, PDF, or PPTX produced from a qualifying request.
